

DEFENSE TECHNOLOGY™ PRESENTS THE WALLBANGER™

A DOOR KNOCK WILL NEVER BE THE SAME AGAIN!

Designed to capitalize on the secondary blast effect of the Defense Technology™ Multi-Port Plus™ Command Initiated Reload, the WallBanger is the brain child of retired SWAT operator, Sandy Wall. A veteran of thousands of high risk entries with Houston's Police Department, Wall worked to solve the problem of getting the door open as fast as possible without the use of explosives. The result is a series of containers which can be manipulated to hold one or two diversion devices over the lock or window. Using a command detonation fuze, the entry can be synchronized with minimum congestion at the entry point. The WallBanger can be used as a "rake and break" tool also. For more information, contact Customer Care at 800-733-3832 ext. 11760 or 11798. Available October, 2009.
